Drive within the designated speed limit

MACHINE SPEED LIMITER DISPLAY

The AusProTec™ Machine Speed Display kit is designed to provide an accurate speed reading for machines without an Original Equipment Manufactured (OEM) speedometer installed or drive line speed pickup point.

The kit consists of a speedo, which is installed onto the dash of the machine showing a speed range from 0-70 km/hr. The system detects the speed of the machine using a ground speed radar sensor which delivers true ground speed measurements for all types of machines.

APPLICATIONS

- Graders
- Scrapers
- Cable reelers
- Loaders
- And many more

Features

- Informs operator of machine's speed
- Allows operator to drive within the designated speed limit

Specifications

Views actual ground surface for accurate speed measurements	
Can be mounted to look forward or backward from machine	
Speed range:	(0-70 km/hr)
Sensor dimensions:	10cm (W) x 10cm (H) x 31.1cm (L)
Sensor harness length:	3 metres Speedo
Diameter:	72mm
System voltage:	24V
