CONTROLMASTER®

Take The Lead As The Process Industry Experts!

Skid Steer Loaders - Process & Refineries

Do you do specialized work in and around refineries, factories, smelters, mills and process plants? This work can often be risky, but with risk comes high reward. But conventional Skid Steer Loaders and support equipment can make this work dangerous to the operator. There is a better way to win this lucrative work.

Loaders can be equipped with retrofitted RCT's advanced remote control systems. This allows operators to remotely operate the machines from a safe location in the work area, away from any potential hazards. Through remote control, the loaders can complete specialised work around active furnaces or vats, moving material in confined spaces, clearing molten or active material; resisting toxic fumes, steam, dust or heat; and avoiding active power lines or bus bars – all through the safety of distance.

Management can confidently bid this work knowing their operators are not exposed to extreme danger of accidents and injuries.

Benefits: Win more specialized work; Lift billable hours; Protect your people; Multi task machines and operators; Scalable options

Features

- Line-of-Sight remote control (radio remote)
- Teleremote (video)
