MUIRHEAD®

What is the forklift speed limit in your work area?

Toyota Forklift Speed Limiters

The forklift is an integral piece of heavy equipment in the transporting and loading of heavy goods and materials safely and conveniently when driven correctly. Operating a forklift at excess speed is one of the leading causes of accidents in the warehouse resulting in both damage to site infrastructure and lost time injuries.

Maintaining the correct speed when driving a forklift can not only ensure safety, but optimise business productivity.

The Muirhead 10444 and 12045 Speed Limiters have been designed to control the maximum speed of Toyota 8FG, 8FD, 8FBE & 8FBN forklifts.

The system operates by isolating the OEM speed control switch (tortoise/hare) mounted in the dashboard of the forklift; preventing the operator from changing the set speed inside the OEM user interface.

The kits can also interface into any of the RCT speed zone systems to enhance the speed control on site, providing two controlled speeds within the work area.

Features

- Increases workplace and forklift safety
- Reduces speed related injuries
- Extends vehicle service life
- Assists in maintaining OHS procedures
- Secure speed programming

Parts

APN:	10444	Speed Limiter (CAN) to suit Toyota 8 Series Deluxe forklift
APN:	12045	Speed Limiter (CAN) to suit Toyota 8FBE & 8FBN forklift
