MUIRHEAD®

Toyota 8 Series Engine Shutdown Timer - the smarter and safer solution

ENGINE SHUTDOWN TIMER

The Muirhead® Engine Shutdown Timer (EST) is a smart and safe product specifically designed to complement the Toyota OEM seat and buckle sequencing system (OPS).

Designed to co-exist and further enhance the OEM system, the Muirhead® EST will allow the engine to run safely for 2 minutes while the operator is off the seat (programmable from 0-5 minutes) as long as the operator has the park brake applied. If the park brake is not applied, the engine will shutdown in 5 seconds.

This acts as a training aid so that the operator is in the habit of applying the park brake before they alight, it enhances safety by automatically turning the engine off after the pre-set time, thus providing lower running and operational costs for the end-user and also taking safety and compliance to a higher level.

Further, if the park brake is not applied and the operator gets on the seat the ignition will not turn on as the sequence is broken - the park brake must be applied first. This reinforces the need to always apply the park brake before alighting.

The kits are custom designed to suit 8 Series Toyota forklifts in the range of 1.8T - 3.5T and have been designed to plug and play into the Toyota machine wiring. This allows for simple and fast installation. They may also fit your larger capacity Toyota models - check with your Toyota technical team for suitability.

Features

- Designed to shutdown the engine after a pre-set time after the operator gets off the seat
- Designed to work with the Toyota OPS - it will not interfere with its operation
- Programmable engine shutdown time
- Fully sealed product to suit all conditions
- Quick installation time using a custom Plug & Play wiring harness
- Simple Fitting Instructions are provided with every kit that ensures continuity of product installation nationally
- Backed by RCT's national support network

Specifications

Voltage	9-32 volts
Operating Temperature	-25 to +70 °C
