MUIRHEAD®

Reduce machine wear and tear

FORKLIFT ENGINE PROTECTION SYSTEM

The Muirhead® Forklift Engine Protection system offers engine protection for forklift machines by monitoring critical engine functions such as oil pressure, coolant level and coolant temperature. The system pre-warns the operator of critical operating conditions prior to the onset of engine failure. This allows the operator to take action to reduce premature engine failure, damage and costly repairs to the forklift equipment.

The system provides both an audible and visual warning and incorporates additional outputs for return to idle or shutdown modes.

Compact in design and easy to install, the forklift engine protection system is an effective tool in the management of engine protection and engine maintenance for forklift machines.

Features

- Monitors critical engine functions
- Easy diagnosis of engine problems
- User friendly display
- Customised electronic circuitry
- Audible and visual warnings
- Australian made and tested
- Universal applications
- Multi voltage applications
- Tamper proof
- Guards against engine failure
- Reduces costly engine repairs
- Reduces operator responsibility
