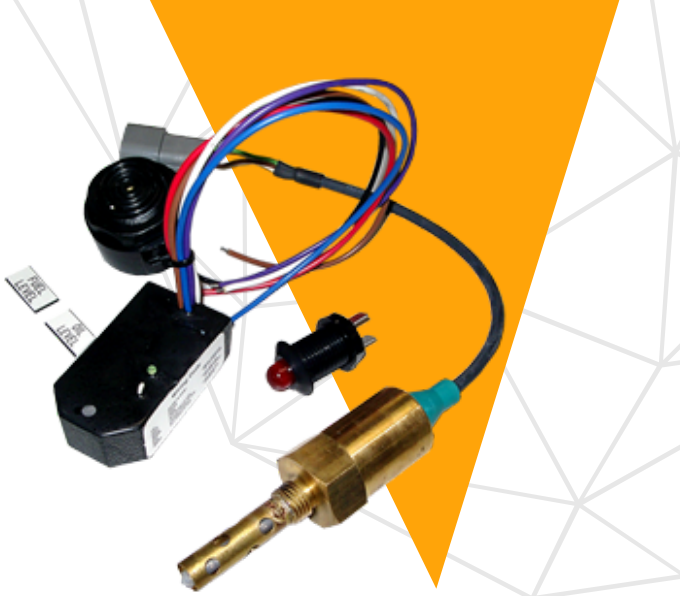
MUIRHEAD®

The device that monitors and warns to prevent unwanted damage



Low Oil/Fuel Warning Kits

The Low Oil/Fuel Warning kits are used to detect low diesel fuel levels. When low fuel level is detected, the LED will illuminate and the audible alarm will sound, providing you with adequate time to prevent unwanted machine equipment damage.

Rather than using a float switch, the Low Oil/Fuel Warning kit uses an oil level switch due to its compact design and high resistance to vibration. It contains no moving parts, and the switch being isolated allows it to be used in an above ground application.

The probe's electronic circuitry is enclosed within a single sealed unit. The level sensor will suit any diesel fuel application for either mobile or stationary equipment.

APPLICATIONS:

Mobile machines, commercial vehicles, generators, pumps and compressors, etc

Features

- Fully sealed electronics
- Compact, robust design
- Monitors diesel fuel level
- 5 second inbuilt delay
- 12V/24V options available
- Prevents unnecessary maintenance repairs
- Avert costly downtime
- Improves equipment life

Parts

APN: 8612 LOW OIL LEVEL KIT (WITH 3072 SWITCH)
