EARTHTRACK®

Maximise Productivity in your earthmoving fleet

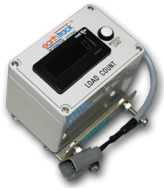

PAYLOAD MANAGEMENT SYSTEM

Payload Management is critical to fleet productivity and availability.

The Payload Management range of products consists of production monitoring tools designed to maximise the efficiency and productivity of your earthmoving fleet. The monitoring tools assist operational staff to achieve the optimum payload every time.

The Remote Payload system works by transmitting payload data between the truck and loader, allowing the loader operator to see the trucks weight to enable them to fill the optimal load. Strut pressures from the truck send both weight and weight distribution to the loader, this ensures an even and accurate Payload is achieved.

By ensuring correct even Payload the stress on Trucks is decreased which maximises machine life and limits unplanned downtime.

Payload Management Tools assist operators to achieve safe loading practices.

Features

- Strut indicators display weight distribution
- Simple integration to OEM truck payload system
- Minimal ongoing maintenance
- suitable to all major makes and models of off road haul trucks
- external payload display available

Parts

APN: 10139 KIT DUAL 6573 DISPLAY
