CONTROLMASTER®

# Warning operators at risk!

## Steel mill and Smelter Track Loaders

Track loaders often work in extreme conditions they are built to protect the machine and the operator when they handle hot slag in steel mill or molten material in metal smelters. But incidents still occur, fires, spillage, unplanned stoppages. This puts the operators at high risk of injury.

RCT can convert track loaders to remote control. Now operators control the machine from a safe location over a line of sight distances. Alternatively camera systems stream video off the machine to a remote operator station.

Operators work productively and go home safer, business risk managed, production continues.

RCT have converted hundreds of different machines for remote operation, our customers know our solutions are dependable, safe and serviceable. RCT have stood by our customers and solutions for over 42 years.

### Features

- Robust remote controls
- Adaptable vision systems
- Modular equipment design
- Interchangeable between loaders
- Scalable onto some networks
- Full Turn-key supply and fitment
- Superior service back up, documentation and spare parts
- OEM product training operators and maintenance
- Deep industry knowledge and experience across RCT
- World's most experienced remote supplier
- Benefits
- Removes extreme business risk
- Adaptable affordable technology
- Machine works within OEM settings
- Hundreds of existing machine applications
