

Control your Straddle Carrier, safely

STRADDLE CARRIER HANDHELD TRANSMITTER

Moving your Straddle Carrier into and around your workshop can be difficult and hazardous. The Control Master® Series CM1000 remotes allow simple and accurate control of your Straddle Carrier to safely move the machine in and around your workshop. They are one of the most reliable and safest handheld remote control devices available in the Australian market and have been built to the highest safety standards for remote controllers in the industry, globally.

The handheld remote controlled device is designed with two proportional paddles to improve control for maneuvering the machine into a restricted space. It also has six digital functions for additional control.

The battery has a life of 10 hours continuous operation and can be fully charged in three hours.

The receiver can be interfaced into the machine control circuit and will not effect normal machine operation.

The transmitter incorporates fail to safe radio signal software control, ensuring instant shutdown of outputs on communications failure between the transmitter and receiver.

The radios operate on the 900MHZ band to provide an industrial, robust, line of site communications link between the transmitter and receiver over a distance of up to 200 metres. No licence required - Free to Air.

Features

- The system is simple to operate and install
- The Handheld Transmitter is fitted with an emergency stop switch
- Configurable outputs
- 12 and 24 volt installations
- IP65 enclosures
- Feedback to operator via LCD display

Parts

APN: 7764	ANTENNA TO SUIT 9319
