CONTROLMASTER®

Get more out of your Skid Steer Loaders by equipping them with Smart Technology.

Skid Steer Loaders

Skid Steer uses can gain the competitive edge by fitting new and existing loaders with RCT's ConrolMaster® remote control systems.

The remote control solutions enable operators to carry out work safely from a distance away from any danger with a greater overall vision of the surrounding work area.

Removing the operator from the driver's seat enables them to tackle the more hazardous tasks without risk of injury; making them more confident and productive.

Remote controls can be used on Skid Steers operating in numerous industries including: construction, process and refineries, container transporters, agriculture and farming and even demolition work – if you use a skid steer, the working environment can be improved with RCT's remote control solutions.

RCT's Line-of-Sight remote control solutions can be retrofitted to any mobile Skid Steer Loader, regardless of make, model of brand.

A Skid Steer Loader operating via remote control technology is advantageous to any company and can increase the number of specialised work won, increase billable hours, and allow operators to multi-task to further increase productivity.

All of RCT's remote control solutions are light weight, durable, easy-to-use and backed by local support. RCT has 45 years' experience in the industry, helping companies to increase productivity, profitability, efficiency and safety.
